-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. ☒ This communication is responsive to 11/19/03.
2. ☒ The allowed claim(s) is/are 1-18.
3. ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 - a) ☒ All b) ☐ Some* c) ☐ None of the:
 1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

* Certified copies not received: _____.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.

THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.

4. ☐ A SUBSTITUTE OATH OR DECLARATION must be submitted. Note the attached EXAMINER'S AMENDMENT or NOTICE OF INFORMAL PATENT APPLICATION (PTO-152) which gives reason(s) why the oath or declaration is deficient.
5. ☐ CORRECTED DRAWINGS (as "replacement sheets") must be submitted.
 - (a) ☐ including changes required by the Notice of Draftsperson's Patent Drawing Review (PTO-948) attached
 - 1) ☐ hereto or 2) ☐ to Paper No./Mail Date _____.
 - (b) ☐ including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date _____.Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).
6. ☐ DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

Attachment(s)

1. ☒ Notice of References Cited (PTO-892)
2. ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
3. ☒ Information Disclosure Statements (PTO/SB/08),
Paper No./Mail Date 11/19/03
4. ☐ Examiner's Comment Regarding Requirement for Deposit
of Biological Material

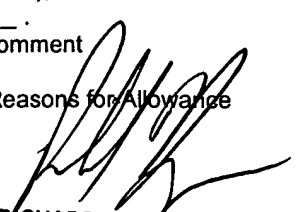

5. ☐ Notice of Informal Patent Application

6. ☐ Interview Summary (PTO-413),
Paper No./Mail Date _____.

7. ☐ Examiner's Amendment/Comment

8. ☒ Examiner's Statement of Reasons for Allowance

9. ☐ Other _____.

DETAILED ACTION

1. This Office Action is response to the Application filed on November 19, 2003. Claims 1-18 are currently pending and being examined.

Allowable Subject Matter

2. Claims 1-18 are allowed.

Reason for allowance

The present invention related to a display system having display controller having using display command signal and display command identification signal to control the data output of the display driver. Each independent claim identifies the uniquely distinct features

“wherein the display controller:

includes first to $(j+2)$ th data output terminals (where j is a natural number) for outputting $(j+2)$ bits of display data out of display data that is output in a k -bit unit (where k is an integer such that $k \geq j+2$);

outputs display data in a j -bit unit to the display driver through the first to j -th data output terminals; outputs command data for controlling the display driver instead of the $(j+1)$ th bit of display data, through the $(j+1)$ th data output terminal to the display driver; and outputs a command identification signal for identifying the command data instead of the $(j+2)$ th bit of display data, through the $(j+2)$ th data output terminal to the display driver, and

wherein the display driver includes: first to j -th data input terminals for inputting display data in a j -bit unit; a latch which fetches the command data that is specified according to the command identification signal;

a decoder which decodes the command data fetched into the latch; and
a control section which outputs a control signal corresponding to a decoding result by the decoder, the display driver driving the data lines based on the control signal and the display data that has been input through the first to j-th data input terminals.” (claim 1)

“ a display controller which supplies multiplexed data including display data to the display driver and also controls the display driver,

wherein the display controller:

includes first to (j+1)th data output terminals (where j is a natural number) for outputting (j+1) bits of display data out of display data that is output in a k₁-bit unit (where k₁ is an integer such that $k_1 \geq j+1$);

outputs multiplexed data in which display data and command data has been time-division multiplexed within one horizontal scan period, in a j-bit unit to the display driver through the first to j-th data output terminals; and

outputs a command identification signal for identifying the command data instead of the (j+1)th bit of display data, to the display driver through the (j+1)th data output terminal, and

wherein the display driver includes:

first to j-th data input terminals for inputting display data in a j-bit unit;

a latch which fetches command data from the multiplexed data, specified according to the command identification signal;

a decoder which decodes the command data fetched into the latch; and

a control section which outputs a control signal corresponding to a decoding result by

Art Unit: 2629

the decoder;

the display driver driving the data lines based on the control signal and the display data included within the multiplexed data that has been input through the first to j-th data input terminals.” (claim 2)

wherein the display controller:

includes first to (j+p)th data output terminals (where j is a natural number) for outputting (j+p) bits of display data out of display data that is output in a k₂-bit unit (where k₂ and p are positive integers such that $k_2 \geq j+p$);

outputs display data in a j-bit unit to the display driver through the first to j-th data output terminals; and outputs command data instead of the (j+1)th to (j+p)th bits of the display data through the (j+1)th to (j+p)th data output terminals to the display driver, and

wherein the display driver includes:

first to j-th data input terminals for inputting display data in a j-bit unit;

a latch which fetches the command data;

a decoder which decodes the command data fetched into the latch; and

a control section which outputs a control signal corresponding to a decoding result by the decoder, the display driver driving the data lines based on the control signal and the display data that has been input through the first to j-th data input terminals.” (claim 3)

“the display controller including:
first to $(j+2)$ th data output terminals;
a mode setting register for setting an operation mode of the display controller to a first or second mode;
a command data output section which outputs command data for controlling the display driver and a command identification signal for specifying the command data; and
a display data output section which outputs display data in a k -bit unit (where k is an integer such that $k \geq j+2$) or a j -bit unit,
wherein the display data output section:
outputs $(j+2)$ bits of display data out of display data that is output in a k -bit unit, through the first to $(j+2)$ th data output terminals, in a first mode; and
outputs display data in a j -bit unit through the first to j -th data output terminals, and also outputs command data instead of the $(j+1)$ th bit of display data through the $(j+1)$ th data output terminal and the command identification signal instead of the $(j+2)$ th bit of display data through the $(j+2)$ th data output terminal, in a second mode.” (claim 7)

“the display controller comprising:
first to $(j+1)$ th data output terminals;
a mode setting register for setting an operation mode of the display controller to a first or second mode;
a command data output section which outputs a command identification signal for specifying command data for controlling the display driver; and

Art Unit: 2629

a display data output section which outputs multiplexed data in which display data in a k_1 -bit unit (where k_1 is an integer such that $k_1 \geq j+1$) or a j -bit unit and the command data are multiplexed, within one horizontal scan period,

wherein the display data output section:

outputs the multiplexed data including $(j+1)$ bits of display data out of display data that is output in a k_1 -bit unit, through the first to $(j+1)$ th data output terminals, in a first mode; and

outputs the multiplexed data including display data in a j -bit unit through the first to j -th data output terminals, and also outputs the command identification signal at a time corresponding to command data included within the display data instead of the $(j+1)$ th bit of display data, through the $(j+1)$ th data output terminal, in a second mode.” (claim 8)

the display controller comprising:

first to $(j+p)$ th (where p is a natural number) data output terminals;

a mode setting register for setting an operation mode of the display controller to a first or second mode;

a command data output section which outputs command data for controlling the display driver; and

a display data output section which outputs display data in a k_2 -bit unit (where k_2 is a positive integer such that $k_2 \geq j+p$) or a j -bit unit,

wherein the display data output section:

outputs $(j+p)$ bits of display data out of display data that is output in a k_2 -bit unit, through the first to $(j+2)$ th data output terminals, in a first mode; and

Art Unit: 2629

outputs display data in a j-bit unit through the first to j-th data output terminals, and also outputs command data instead of the (j+1)th to (j+p)th bits of display data through the (j+1)th to (j+p)th data output terminals, in a second mode.” (claim 9)

The closest prior art of Aoki (U.S Patent No. 6,657,648), Nagai et al. (U.S Patent No. 7,015,902) and Ishiyama (U.S Patent No. 6,930,675) show similar systems which also have display controller using command data and command identification data to control the output of the display driver, but either singularly or in combination, fail to anticipate or render above quoted limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DUC Q DINH whose telephone number is (571) 272-7686. The examiner can normally be reached on Mon-Fri from 8:00.AM-4:00.PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner’s supervisor, Richard Hjerpe can be reached on (571) 272-7691. The fax phone number for the organization where this application or proceeding is assigned is **571-273-8300**.
